A.S.T., Inc. has more than 33 years of experience as a full service electronic engineering, manufacturing, service, and software development company. A.S.T., Inc. was founded to support the engineering and manufacturing requirements of our parent company Universal Data, Inc. By 1979, we were producing lightweight handheld computer terminals on a private label basis.

The success of our early models led to the development of an entire family of portable handheld terminals, industrial computers, and associated software to meet a wide range of logistics, warehouse management, and data collection needs. Our terminals have come to be known as the "Sherman Tank" of handheld computers due to their ability to withstand harsh industrial and environmental conditions.

We are the largest manufacturer of data collection hardware for the inventory services industry and the third largest manufacturer of data collection hardware in a $2 billion US market. We provide products and services for inventory services, large and small, and for specialty retailers, logistic carriers, rentals, and hospitality services. We have supplied custom applications and unrivaled support to the largest inventory company in the world for the last 33 years.

Today we continue to engineer and manufacture the highest quality and most durable handheld data collection terminals available, as well as providing software development, and product service to our Integrated Customers. This allows our customers to stay focused on their core business.

UDI-650

Using Microsoft's Windows CE.NET operating system, this device can handle the latest application technology. Whether you are using browser-based software or deploying applications to the handheld, the UDI-650's built-in browser and 64MB RAM can handle your needs. A Type II PCMCIA slot, Type II Compact Flash slot, USB 1.1, Bluetooth ready, serial port, and IRDA 1.1 port make this unit the most versatile handheld unit available.

TITAN

The TITAN series is the most versatile inventory data collection terminal available. TITAN handhelds are designed to deliver the maximum in performance and reliability. The sturdy case withstands even the roughest abuse. Extremely low power consumption delivers 144 hours of battery life with the user scanning every 5 seconds! A full-speed USB port allows you to download files and upload data quickly and accurately. High-speed barcode scanning ensures your data is collected accurately.

With the TITAN EPG Data Collector, TITAN Inventory Manager, and TITAN Inventory Control System software, you can get your inventory up and running quickly.

WRIST SCANNER

Providing hands-free operations, the wrist scanner encourages productivity and efficiency. The lightweight, low-profile design allows for free movement and ease of use. With internal vibration, the user knows they have a successful scan even in the noisiest environments. This product is also available as a wireless Bluetooth device.
